CS 70 Discrete Mathematics and Probability Theory Fall 2021 DIS 2B

1 True or False

- (a) Any pair of vertices in a tree are connected by exactly one path.
- (b) A simple graph obtained by adding an edge between two vertices of a tree creates a cycle.
- (c) Adding an edge in a connected graph creates exactly one new cycle.

2 Eulerian Tour and Eulerian Walk

- (a) Is there an Eulerian tour in the graph above? If no, give justification. If yes, provide an example.
- (b) Is there an Eulerian walk in the graph above? An Eulerian walk is a walk that uses each edge exactly once. If no, give justification. If yes, provide an example.
- (c) What is the condition that there is an Eulerian walk in an undirected graph? Briefly justify your answer.

3 Not everything is normal: Odd-Degree Vertices

Claim: Let G = (V, E) be an undirected graph. The number of vertices of *G* that have odd degree is even. Prove the claim above using:

- (i) Direct proof (e.g., counting the number of edges in *G*). *Hint: in lecture, we proved that* $\sum_{v \in V} \deg v = 2|E|$.
- (ii) Induction on m = |E| (number of edges)
- (iii) Induction on n = |V| (number of vertices)

4 Coloring Trees

Prove that all trees with at least 2 vertices are *bipartite*: the vertices can be partitioned into two groups so that every edge goes between the two groups.

[*Hint:* Use induction on the number of vertices.]
